Thermal & Fluids Analysis Workshop
TFAWS 2017
August 21-25, 2017
NASA Marshall Space Flight Center
Huntsville, AL

- Introduction
- Calorimeter overview
- Calorimeter photos
- Test results
- Thermal model discussion

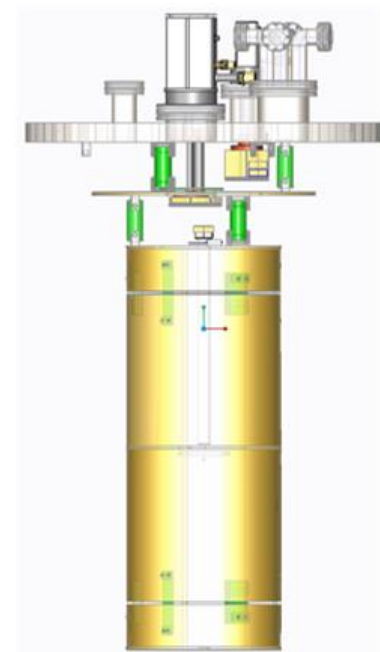

Calorimeter Overview

Vacuum tank

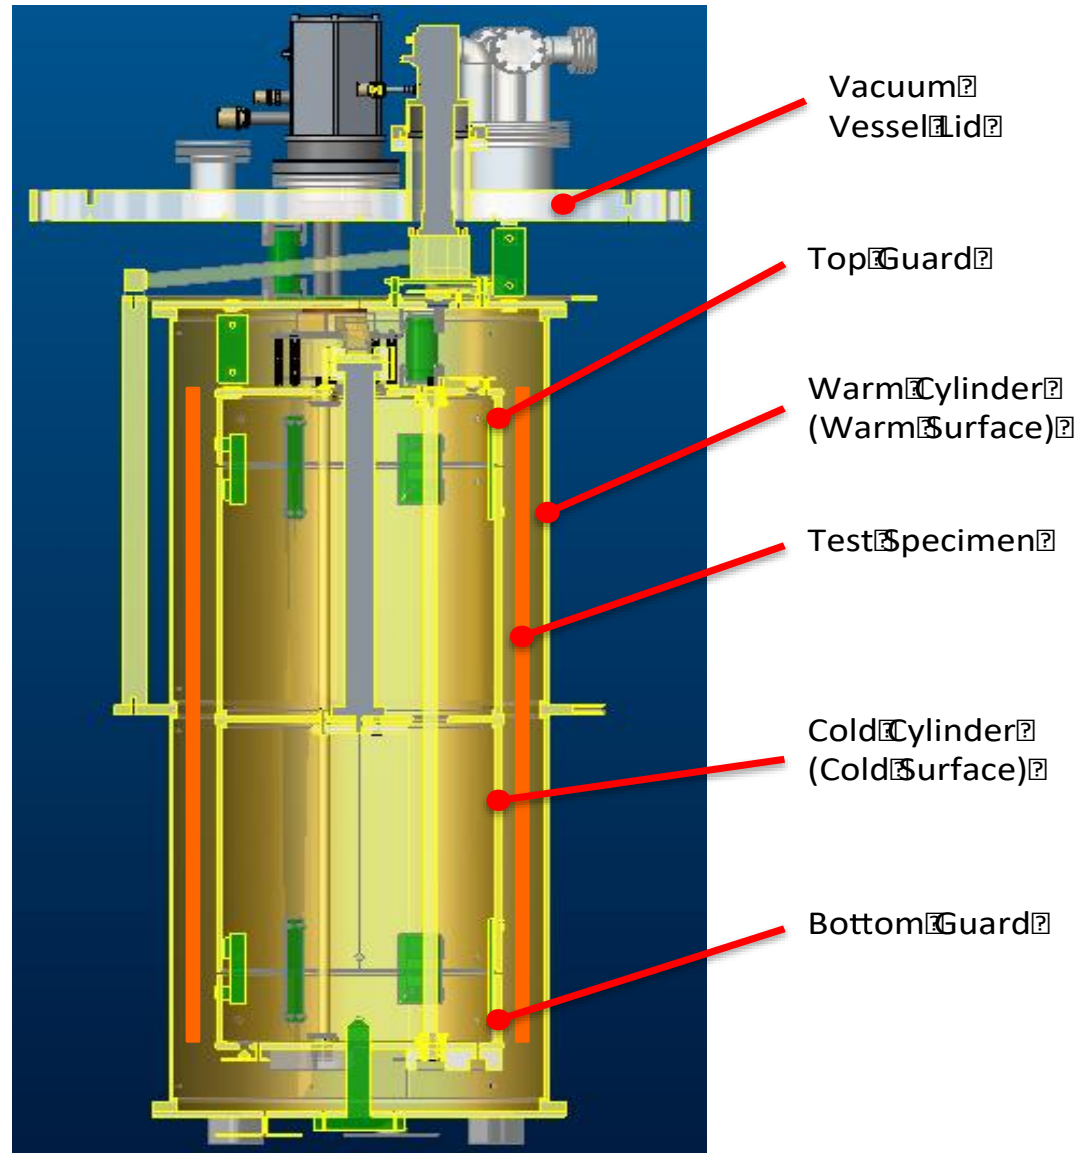

Copper auxiliary wall

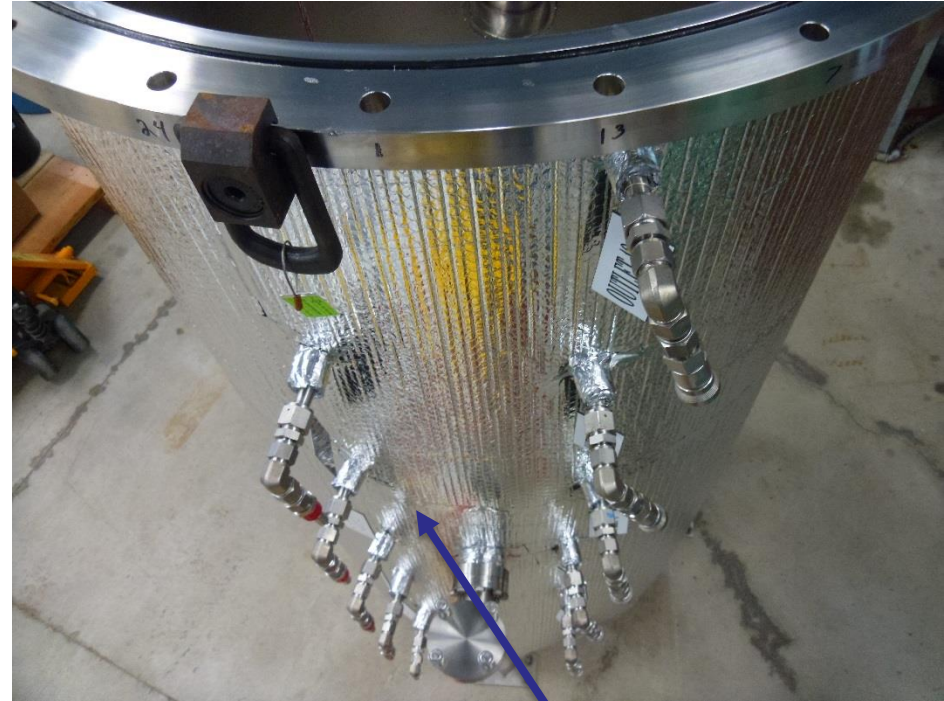

Test section

Calorimeter Cross-Section

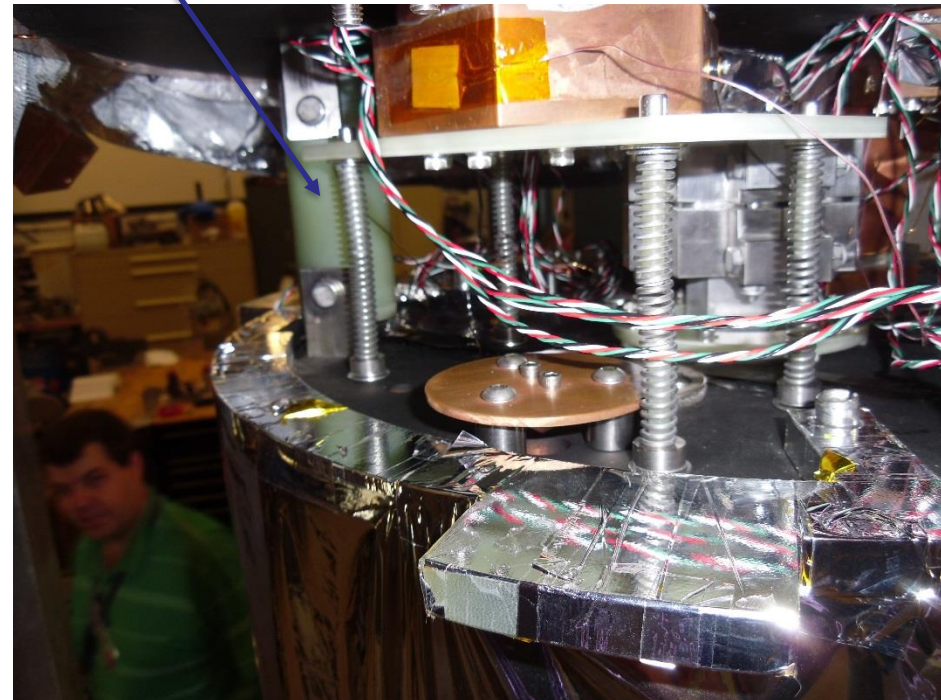

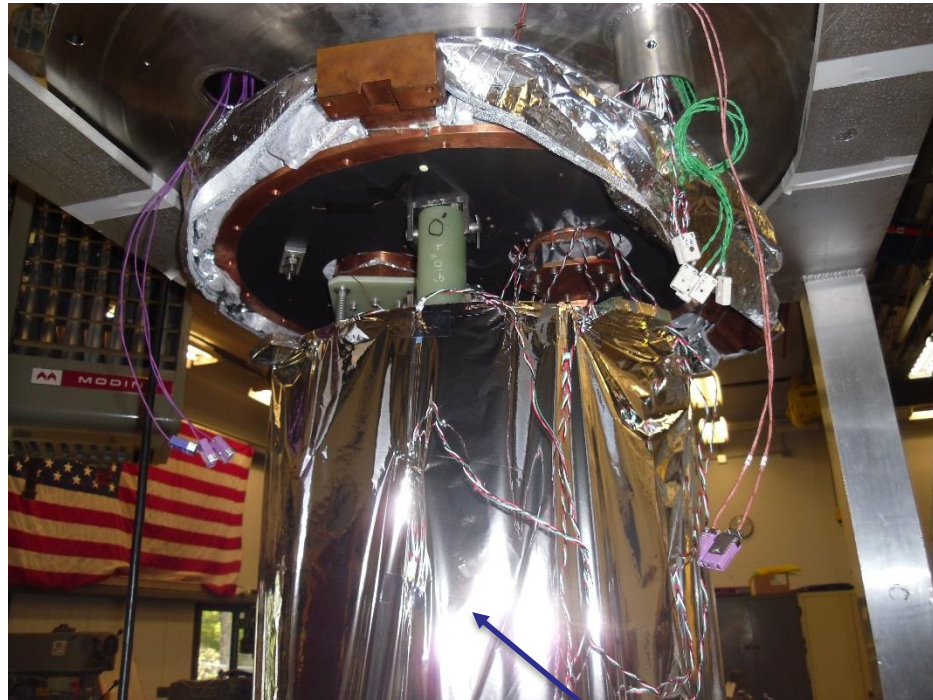

Copper

Black paint AZ-306

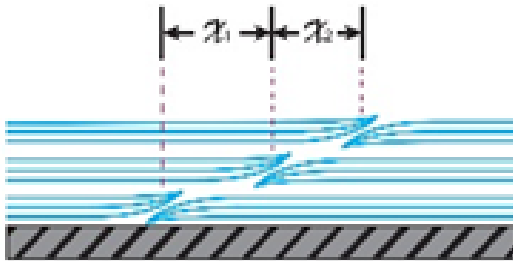

Water/glycol cooled jacket

G-10 support

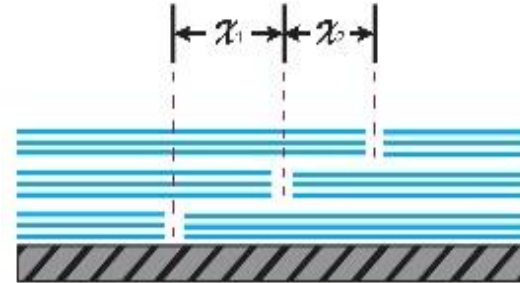

insulation

Seam configuration

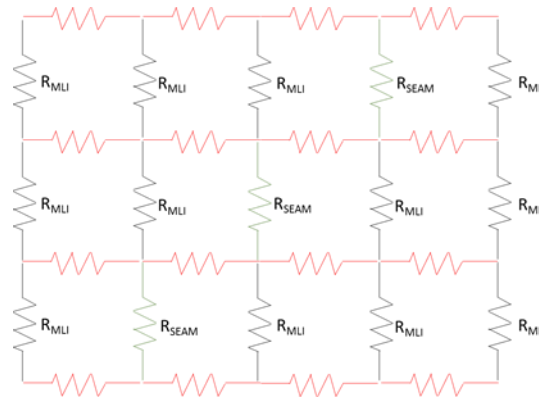

3 Blanket Overlap Staggered

3 Blanket Staggered

Desire to model staggered over lap and butt seams

Typical Solution for MLI Heat Load

- There are multiple 1-D MLI solution methods
 - Direct (a.k.a. “Layer by Layer”)
 - Semi-Empirical (“Lockheed”, “Modified Lockheed”, “Cunnington”)
 - Polynomial fits
- These solutions assume blankets are “ideal” and from laboratory calorimeter data
 - Historical tank data off by factor of 2 – 10
- Cannot use these methods to predict heat load from a seamed blanket

Test	Configuration	# of layers	layer density lay/cm	Q_{flux} W/m ²	Q_{seam} W/m	Q_{pred} W/m ²	DF	dDF
1	Overlap	50	17.4	0.564	0.044	0.116	4.9	0.25
2	Interleave	50	17.1	0.536	0	0.116	4.6	-
3	Butt	50	18	0.576	0.061	0.116	5	0.35
4	Butt - 1 stagger, 2 in	50	19	0.577	0.062	0.116	5	0.35
5	Butt - 1 stagger, 4 in	50	17.9	0.580	0.06	0.116	5	0.38
6	Interleave	20	16.6	0.727	0	0.28	2.6	-
7	Overlap	20	16.6	0.729	0.003	0.28	2.6	0.01
8	Butt - 1 stagger, 2 in	20	18	0.861	0.204	0.28	3.1	0.48
9	Butt - 0 stagger	20	18	0.823	0.146	0.28	2.9	0.34

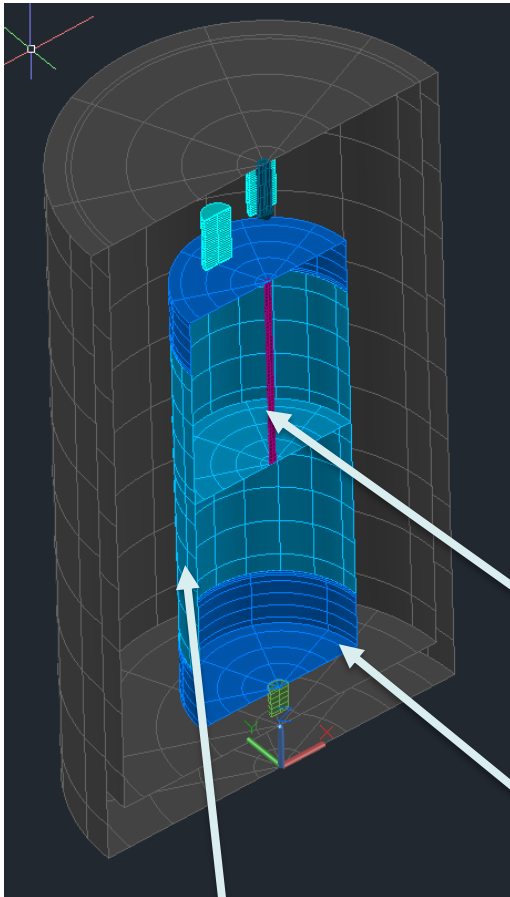

Q_{pred} using “Layer by Layer” method

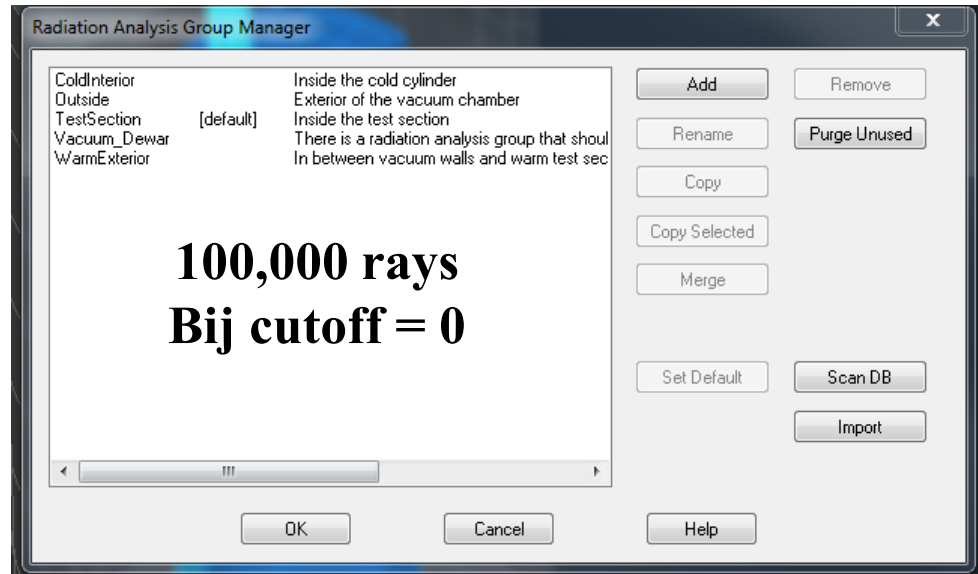

Thermal Desktop model assumptions

- Steady state
- Water cooled jacket approximated with isothermal boundary node and conductor
- Cryocoolers approximated as isothermal boundary nodes at the test condition
- Temperature dependent properties (including emissivity)
- Diffuse radiation
- Optically thick layers

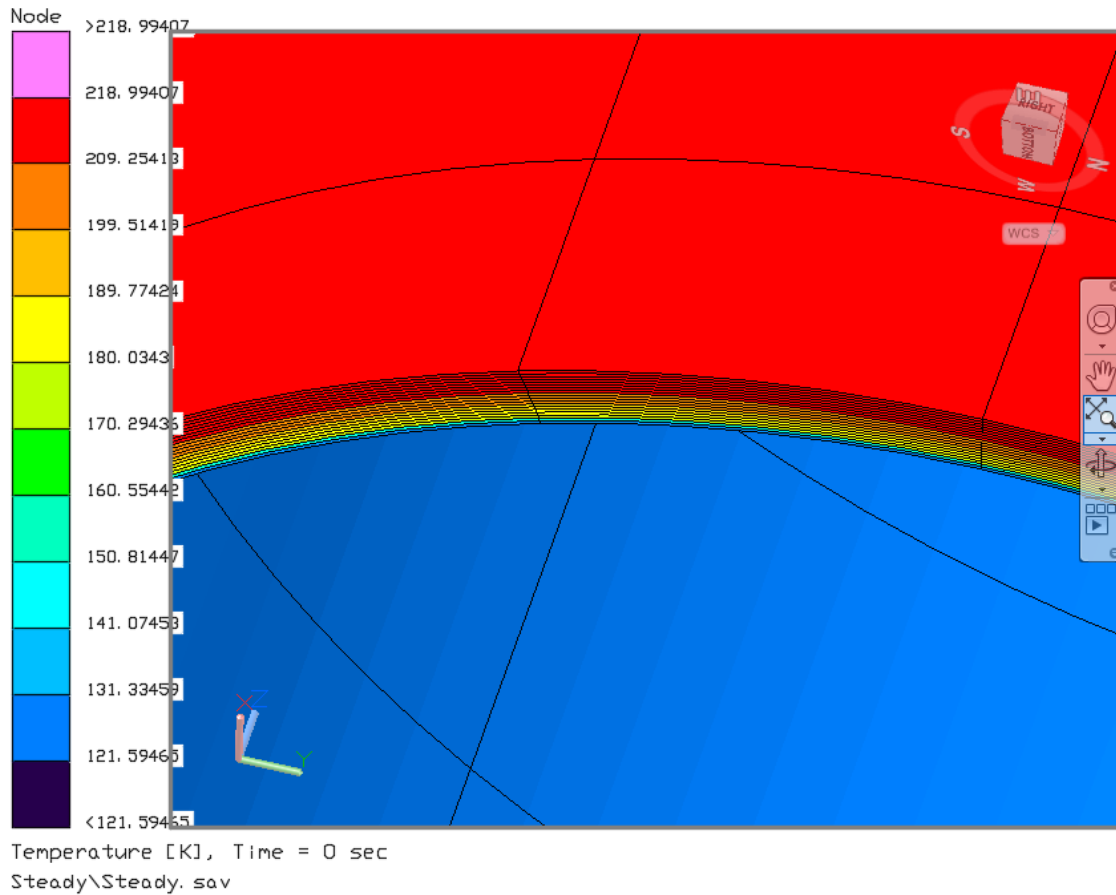

Test section

aluminum 6061 rod

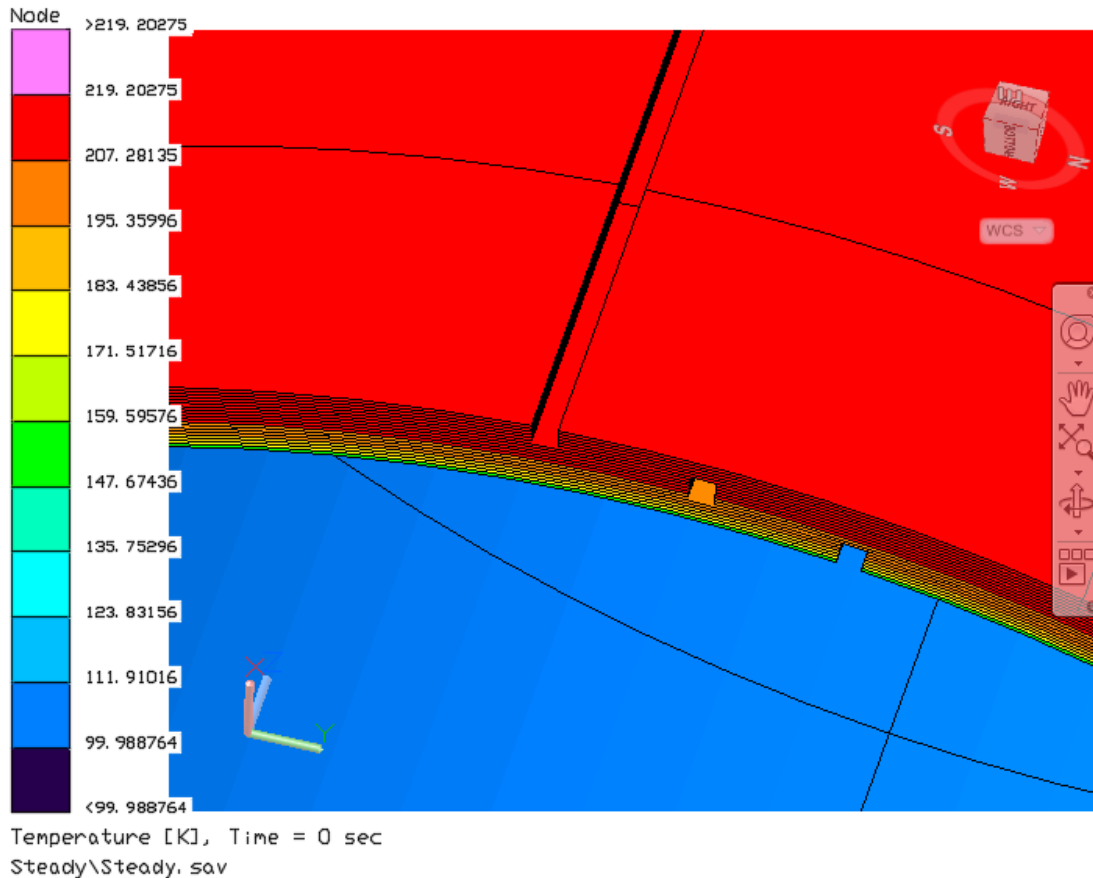

Cold guard

20 layer interleave

$$Q = 0.30 \text{ W}$$

$$Q_{\text{flux}} = 0.216 \text{ W/m}^2$$

$$Q = 0.37 \text{ W}$$

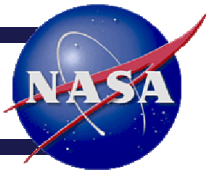

$$Q_{\text{flux}} = 0.27 \text{ W/m}^2$$

$$Q_{\text{seam}} = 0.06 \text{ W/m}$$

**2.3 times lower
than measurement**

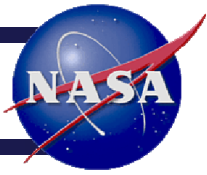

Conclusions and Forward Work

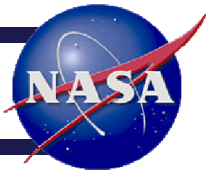

- TD can be used to model MLI in detail, including seams, to within a factor of ten of the true answer
- When correlated / validated, the model will be used to tabulate a set of results useful for first order estimates at the system level

Acknowledgements

- This work was funded by the Space Technology Mission Directorate's Evolvable Cryogenics Technology Demonstration Mission under the Improved Fundamental Understanding of Multi-Layer Insulation task.
